

LAB Logbook

Lab 1

Code :

```
a = np.arange(31)
```

```
print(a)
```

```
a1 = a.reshape(1, 31)
```

```
print(a1)
```

```
a2 = a1
```

```
print(a2)
```

```
print(a2.shape)
```

Output :

```
[ 0  1  2  3  4  5  6  7  8  9 10 11 12 13 14 15 16 17 18 19 20 21 22 23
 24 25 26 27 28 29 30]
[[ 0  1  2  3  4  5  6  7  8  9 10 11 12 13 14 15 16 17 18 19 20 21 22 23
 24 25 26 27 28 29 30]]
[[ 0  1  2  3  4  5  6  7  8  9 10 11 12 13 14 15 16 17 18 19 20 21 22 23
 24 25 26 27 28 29 30]]
(1, 31)
```

The vector contains 31 elements because the last two digits of my SID are 31. After reshaping, the array has 1 row and 31 columns, giving a shape of (1, 31).
